

**I have added Process_Explanation_to_All based on questions the TAs had asked.
Please read that first and then proceed here.**

Questions from Team 10 – as discussed in the meeting on Sep 18th.

Observer Eligibility:

1. When we determine eligible observers for a course, must the observer be in the same school, same department, or **both**?
 - **Should be in the same department**
 - right now, same department.
 - **Stretch goal is to make it configurable.**
2. Should course level be determined strictly by the 1st digit of the course number (i.e. 1000-, 2000-, 3000-, and 4000-level courses)? How should we handle graduate level courses?
 - **Numbering continues into graduate courses also like 5000, 6000 & so on.**
3. If fewer than 5 eligible observers exist, should our system display everyone that qualifies? What should happen if there are no eligible observers?
 - **Fewer than 5 : display all**
 - **No eligible observers : notify a message in the dashboard of Assessment Committee members**

4. If more than 5 observers are eligible, should the system just randomly pick 5 of them, or should it consider external factors such as workload, prior participation history, or availability?

- **Availability during the preferred timeslot.**
 - **1000-level Prof of department ABC can only observe another 1000-level Prof in same department (similar requirement for all level courses)**
 - **If Prof A from the ABC dept is requesting for 1000-level course on MW 8:30 am, then**
 - **system should show 5 Profs who are free at that time AND who teach 1000-level courses in the same department**
 - **If 5 or more observers are available, then randomly pick from this pool.**
 - **Incorrect occurrences:**
 1. not the same Prof
 2. not a same-level Prof from another dept
 3. not a different-level Prof from same dept or any dept
 4. not a same-level Prof from same dept but who works during the requested days/times

PRIYA to ADD SAMPLE SCENARIO – sample scenario added above

Observation / Evaluation Flow:

1. Should observer invitations be sent to 1 selected person at a time, or can the observee contact multiple candidates simultaneously?
 - **The list of 5 observers needs to be shown to the Observee.**
 - **Maybe provide a checkbox alongside the name and give choice to the Observee to generate a request to be sent to all the Observers or pick and choose the Observers**

2. Should invitations have an expiration date? Can an observee cancel a pending invitation and choose someone else before actually receiving a response?

- Typical expectation is people respond within 48 hours. So, by that expectation, invitations should expire after 48 hours.
- ~~So, it is possible that an Observee reached out to a subset of observers initially and received response from one of them; once the Observee gets a confirmation, the system should automatically send a graceful cancellation email to the other observers in that subset.~~

- Please check this portion in the Process_Explanation document

3. Both the observer and observee will need to confirm that an evaluation/observation happened. What should happen if 1 person never confirms or disputes that it occurred?

- ~~It is possible that the Observer forgets to upload the signed observation form.~~
- ~~This is the reason for the system to remember the pairing once an Observer confirms a request from an Observee.~~
- ~~Also, when the Observer uploads the observation form to the system, the system should send a notification to the Observee that Observation has been uploaded, and the uploaded observation should be viewable to the Observee.~~

- To avoid this complexity, I changed the requirement that the Observation is going to live in the webapp. Please check this portion in the Process_Explanation document

4. Does the observee's confirmation only acknowledge that the observation happened, rather than indicate agreement with the observer's ratings and comments?

- By signing the observation, the Observee agrees that the observation happened at that date/time.
- If there is something that the Observee needs to add on, then they should be given a chance to upload their view in to the system.
- Please check this portion in the Process_Explanation document

Evaluation Form:

1. When the Assessment Committee edits the observation form, should existing observations retain the older version of the form?
 - **Once an observation is signed, NOBODY gets to edit it.**
2. Should the committee be able to edit rating ranges, question types, required questions, and weights? Or edit the wording of the criteria?
 - **Assessment Committee members should be able to change everything that you mentioned in the template of the Observation Form.**
3. Which completed-record formats are required for our MVP? An in browser view, printable page, PDF/Docx download, or a combination of them?
 - ~~Printable page~~
 - ~~PDF/Docx download: The expected entry fields should be editable. The criteria/ranges should not be editable by the Observers.~~
 - ~~Stretch goal: in-browser view~~
 - **Required: In-app view of copy of the Observation Template**
 - **As the previous possibilities create more complex scenarios, we will let the Observer use a copy of the Observation Template and make notes directly in that copy. Then Both Observer & Observee can sign that copy.**
 - **Please check this portion in the Process_Explanation document**
4. After an evaluation is submitted, can it be corrected and/or re-opened? If so, which user role can authorize that change?
 - **See response to question #1 in this category**

Authentication, Roles, Data:

1. Will our team get access or documentation for actual UTD Single Sign On, or should the MVP use demonstration accounts with role-based authentication? For reference, our team was thinking of utilizing Django for authentication and then consider something else if UTD sign ons are a must.
 - **Demonstration accounts with role-based authentication are good.**

2. What is the expected method for getting our Coursebook data? Is there an API available or would a 1-time import using sample or anonymized data be sufficient enough?
 - **I do not think there is an API for this.**
 - **1-time import using sample or anonymized data is good enough for MVP**
3. Which actions should be available to faculty, observers, Assessment Committee members, and department heads? In particular, who can modify information, evaluation cycles, form templates, and completed records?
 - **Evaluation Cycle:**
 - **Only Assessment Committee members can modify this.**
 - **Form templates**
 - **Only Assessment Committee members can modify this.**
 - **Completed records (I assume that you mean Observations):**
 - **NOBODY**

Course Progress (This is mostly for me as the Lead):

1. Until a TA is assigned, should we continue using the same Thursday weekly report format and attend Friday meetings with you?
 1. **Good news. As of today morning, the TAs have been approved to work. I am working with them to match based on mutual availability of the TA and various teams.**
 2. **Before EOD 09/20, all this should be settled, and info will be posted in the General Channel.**
2. For the October 9 proposal, is there any required template? For context, a SOW & requirements document were made by our team already. Could our SOW serve as the proposal if we add the required approval and signature sections? Or would you like us to make a whole other document? I only ask this because our SOW and requirements document will most likely supply most, if not all of the content in a proposal document.
 1. **Refer to Dr. Razo's proposal format.**
